

Infrared Thermal Imaging Conference

The infrared thermal imaging market is becoming a focus. Yole Développement (Yole) predicts that non-cooled infrared thermal imagers will ship at a compound annual growth rate of 15.8% from 2016 to 2021.

Infrared thermal imaging not only has huge potential applications in the security, forest fire prevention, inspection and quarantine and medical industry, but also is playing great roles in the field of industrial production. Infrared thermal imaging cooperating with machine vision and robots technologies is helping manufacturing industry to develop towards higher and higher intelligence.

Organizer:

Messe Muenchen Shanghai Co., Ltd.,

ACT International

Date: March 15, 2018

Venue: Room M7 at hall W4, Shanghai New International Expo Centre

Registration Fee: Free

Topics:

- The latest developments in infrared materials, infrared devices and infrared equipments
- Applications of infrared thermal imaging in industrial process control
- Infrared thermal imaging used for quality inspection and nondestructive inspection
- Applications of infrared thermal imaging in security and protection
- Applications of infrared thermal imaging in the automotive industry
- Infrared imaging in cooperate with machine vision and robot technologies
- market development trends of infrared thermal imaging
